THE CASE OF USCAR WILDE

The start of virtuous indignation with which the English people received the evidence of Oscar Wilde's infamous practices was not out of place. It may even be said that the withdrawal of incoming the control of the c even be said that the withdrawn! of his works from public libraries is not entirely a piece of Quixoticism, although it the same rule of judging books by the private life of the author were generally marked into affect it has be found. erally carried into effect it is to be feared that the world would lose some of its literary masterpieces.

But the question that naturally prises

why the Englishmen have saved the of their virtuous horror until now and for Oscar Wilde. He deserves odinus, but why does he bear it alone? oding, but why does no sear the Pall It is not so many years since the Pall Mall Gazette exposures horrified such t of the world as still main-ied a regard for decency. In the unutterably foul slime of that expose were involved names that were once known in glory throughout the world. Scions in giory throughout the world. Scions of houses that have made history were dragged in the mire of bestial habits, and even the royal family was not lef

unamirched.
Such was the Pall Mall Gazette exbuch was the Pall Mail threatte ex-pose, and its details were never im-peached. On the contrary, so true was it that averywhere on the round earth were seen the sons of the British nobility who thought it better to go into exile for a time than to risk the airing of their practices at home.

Did a shudder of horror then go over

Did a shudder of horror then go over England? If it did it was right and-denly repressed. Did the people de-mand victims, as they now demand that Occar Wilde shall be one? They did not. They dare strike the one man, not. They dere strike the one man, but the many scient of nobility, and even of royalty, they dared not touch.
Their present virtuous indignation is all right, but it involves a question con-

cerning their moral courage.
While you shudder at the infamy of Oscar Wilde, it is just as well to remember that he does not stand alone; the proof was offered that his base practices are not uncommon among the male slock of the British aristocracy.

the invested than in a thorough streetsprinkling service. Hard times make
economy in public expenditures imporative, but the work of economizing should
be directed at other branches of the
public service than street-sprinking.
Thorough work in this department is
essential both to health and comfort.
The discomfort of the long summer of
the interior portions of California is due
more to the dust than the heat. Disbases are aggravated by the dust that
would otherwise yield to the beneficent
influence of the combined warmth and
dryness of the interior summers. With
the dust of Fresno streets pernasonaly

of the summer months will cease, and
nothing but praise will be heard of
a climate which has no superior for its
nibleness and salubrity.

In this connection attention may be
called to the fact that a mistake has
been made in the past by postponing
the beginning of street sprinkling until
the first of May, regardless of the condition of the streets. This is the poorest
kind of economy. Very often by that
date the streets have become extremely
dusty and much of the work done dur-

Construction of the Righ Scho Building to Begin-An Indemnity Bond.

The board of education met last night The heard of odmeation mot last ingit with a full attendance. This was an adjurrant meeting from last Toesday night. R. B. Butler again appeared before the heard concerning the Terry block. He stated that on May 2d the title to the block will be absolutely cleared. He received a beforean vesterday to that effect from absolutely extended to that effect from the guardian of Mrs. Terry's estate. Mr. Batter wanted a written contract with the board granting him the seventeen

the beard graming him the seventeen days more to clear up the title. Provident Church hero took occasion to state that he could not see why the construction of the building should not begin immediately, as the mutter of clearing the title is a more formality. Here Trustee Hadsell pulled a type-written resolution from his pockst. He handed it to Clerk Chumnings, who read with an apparent familiarity of the copy. After three or four preliminary whereases the resolution ended as follows:

Whereas, from the statement made by Whereas, from the statement made by R. B. Batler, it appears that the pro-ceedings for perfecting said title are well under way, and that said title can be and will be perfected within thirty days

under way, and both said and will be purfected within thirty days from date.

Now, resolved. That this board extend the time for merfecting said title and for the conveyance to this board of said property, thirty days from the date hereof, or condition that the said flurier give a good and eathcient bond, quaranteeing to this board a perfect titla to said property; and further, indemnifying this board against any and all ontiny and expense that may be incurred by reason of said delay and by reason of the progress of the building upon said property; and further, entering into a written contract with the board to make said one-way and expense within said time, free and clear from all incumbrance.

After the resolution was read Gunnings immediately moved and Hadsfell seconded its adoption. Tresident Church put the question and Cammings (Galla-

Clerk Cammings read with considerable rapidity. The resolution was carried with the same vote as the first one. It authorizes the chairman and secretary of the board to enter into a written agreement with R. B. It was then ordered by the majority that Contractor Hickox be notified to be ready immediately to begin the errotion of the high school building. Hickox was allowed \$115 for the usexaving work he has done on the block. June 14th was fixed as the date for the account of the contract of the contract of the contract of the organization of the new board will be hald. It is thought that Trustee Eden will be made chairman. A letter has been rescrived from State Superintendent Black requesting that agreed test, case be made of the time of the expiration of trustees' term of office. No action was taken. In all probability Mr. Morre will be readed this morning without objection.

How is a quaint little story told of a young couple upon their wedding trip, erossing from Dover to Calais. Jenny had grown fixed and sielly on deek, and James had led her to the saloan below, formgly wrapping her up in a Scotch plaid in a sing looking comer. He then weat and fetched her some can decidente and was not loss lavish of ondering words until—until he found he had made a mistake.

His wife had moved to another correct the saloan more free from drafts,

His wife but moved to another corner of the saloss more free from draft, and an elderly woman with just the same sort of plaid had taken her place. Realizing the condition of adairs, James dropped the cologne battle and fluid. Later he indused his wife to go and apologize to the woman he bud unwittingly havished temberness upon, and Jenny wen.

The Theory of Professor Woltner's Sai Wheel Flying Machine.

Wheel Figure Machines
The essence of Professor Wollner's in
movation is his invention of the sai
wheel. It consists of a horizontally
placed axis with spokes and arolle
arreplaces attached to them in a cylin
white recovery with a round in arroplanes attached to them in a cyan-drical form. While revolving round the axis the latter take a slightly slanting position, which causes the forward edges position, which causes not are of these surfaces to be inclined, and consequently to compress the air in the way of a sail or a kite, calling into play the areas force. Throughout number across

of a sail or a kite, calling into play and vertical force. Throurists running across each lifting surface and made in the form of a seriew it. Instanto the same time series strengthen the accordance and to nide to the horizontal force.

These sail wheels set in pairs can be placed, according to the size of airship aimed at, in one or more groups of two wheels, revolving in opposite directions, behind or beside each other. The sign shaped car, furnished with a motor and sarrying the accounts, is attached horizontal the sail of the websels. shaped Car, Harmshou warrying the acronauts, is attached horizontally under the conter of the wheels so that the whole construction will resouthly under the center of the wheels, so that the whole construction will resounded a colossal bird, propolled, instead of by wings, by revolving wheels, the lifting surfaces of which are consecutively and constantly developing vertical and horizontal power. The bird's movements in dying and the speedy headway motion meessary to the kite dlying muchines for their support in the air are in Professor Wellma's invention changed to a relaxy motion. This construction, while permitting of nearly slow account, nearest the horizontal position and constant stability of the ntrahip, at the same time permitting of a high velocity.

the attailip, at the same time permission of a high velocity.

The more the latter is increased the stronger is the litting power developed. The direction is given by a rudder at the end of the ship or by increasing the velocity of the sail wheels on one side only. It is the peculiar quality of these wheels that they do not, as might be supposed, disperse the nir around them. They rather attract it toward their rapidly moving surface, emileusing it in a powerful stream, which passes down a obliquely through their epitheless. Their a powerful stream, when passes to on-obliquely through their cylinders. Their velocity can be made to surpass by far that of railway trains, thus enabling them to conquer contrary winds and air enrouts.—Miss Holono Bonfort in Pap-ular Beience Mouthly.

Electricity Generated In Its Month.
A curious case has been recorded in which an electric carrier was found to be generated by a plate of artificial teeth. A patient consulted his dector on account of a severe pain in his tongue. But the sufferer was assured that there was nothing the matter. He then paid a visit to his dentist, who informed him that his teeth were perfectly sound. Hoing, however, dissatisfied, he called upon an electrician be knowned asked him if it were possible to could have any electricity in his month. On examining the teeth his friend found that two metals were used to fix them to a composition plate. To these metal wires were then attached and connected were were the metals were suffered and connected were suffered to a composition plate. To these outed were super the metals were suffered to a composition plate. Electricity Generated In His Mouth that two metals were used to fix them to a composition plate. To these metal wires were then utuched and connected to a galvanometer. Then the teeth were replaced in the patient's mouth and the metals moistoned with saliva. No sooner was this done than the galvanometer showed quite a large current from so small a source—chough, it is stated, to cause uteration and severe pain when long continued upon so sensitive an organ as the tongen. The plate was covered with an insulating varnish, and thenceforward all the trouble censed.—Industries and Iron. Industries and Iron.

A Senseless Flirt.

At one of the adurban stations along the line of the Rending railroad an en-terprising soap manufacturer has creet-ed a factory and wavelenes. Facing the line of the Rendling railroad an enterprising soap manufacturer has orected a factory and warehouse. Facing the railroad is the large bulk window of the unit salescoom. In this window on day a few weeks ago there appeared to the riders on the early menting trains a very protty girl, who appeared to have paused in the midst of her haber of washing the window to flirt with the travelers. Nearly every male rider who saw her proceeded to firt with her, and the male riders on all trains that passed during the day did the same. In fact, she has been flirted with user since, although most of the rogular riders have long since fearmed that the beautiful young girl in the window is but a waxen flurre.—Philadelphia Record.
